**Reviewer 1:**

Comments to Authors:

Suggested improvements:

1. Terms such as "instruction-tuned LLMs" and "RAG framework" are introduced in the discussion without adequate explanation.

Please consider adding brief definitions or footnotes for clarity.

2. Tables II and III could benefit from clearer visual formatting—Align the text in the table both horizontally and vertically

3. Figure captions (e.g., Fig. 13) can be made more concise and informative.

4. A few sentences still contain awkward phrasing (e.g., "each factor is assessed to ensure maximum effectiveness and positive user

experience" could be refined to "...to ensure a positive and effective user experience").

5. Consider tightening the sentence structure in the Discussion section, especially to reduce overuse of passive voice.

6. While the manuscript proposes multilingual and scalable adaptations, it would be helpful to briefly mention specific strategies (e.g.,

transformer-based OCR models or lightweight models for mobile use) to strengthen future work.
